### The Books - coding club - learn to program well

Remember that expressions are just values combined with operators, and they always evaluate down to a single value. A data type is a category for values, and every value belongs to exactly one data type. The most common data types in Python are listed in Table 1-2.The values -2 and 30, for example, are said to be integer values. The integer (or int) data type indicates values that are whole ...

### Chapter 1 - Python Basics - Automate the Boring Stuff

Python Practice Book, Release 2014-08-10 When Python sees use of a variable not defined locally, it tries to find a global variable with that name. However, you have to explicitly declare a variable as globalto modify it. numcalls=0 def square(x): global numcalls numcalls=numcalls+1 return x \* x
