1.6L Honda Civic (Civic del Sol) is a pretty easy and simple affair, since the spark plugs are right on top of the engine. This tutorial will walk you through the entire process in a step-by-step fashion and will also help you interpret your test results.

Part 1 -How to Test Engine Compression (Honda 1.6L)

A newer engine should

Type

have compression readings above 150 psi. As the engine wears, compression will drop. In general, for high mileage engines, you would want to see compression in the range of 125-150 psi, the higher the better, but remember, it should be balanced-the lowest should be at least 75% of the highest reading cylinder.

100 PSI is the

minimum. It should be 125 to 150, and some engines have as high as 170 PSI or more.

Yes, an engine can run with lower

compression, but it will run very poorly. I've

seen old, big, multi-cylinder outboards run with as little as 65 PSI and some lawnmowers

run even less.
