distinction between the former and the latter categories is often revealed by the acronym chosen. 'Strong' AI is usually labelled as AGI (Artificial General Intelligence) while attempts to emulate 'natural ...

Artificial intelligence - Wikipedia

Discussions of race and intelligence, specifically claims of differences in intelligence along racial lines, have appeared in both popular science and academic research since the modern concept of race was first introduced. With the inception of IQ testing in the early 20th century, differences in average test performance between racial groups were observed, though these differences have ...

5 Ways Technology Has Changed the Accounting Industry

The rapidly growing capabilities and increasing presence of AI-based systems in our lives raise pressing questions about the impact, governance, ethics, and accountability of these technologies around the world. How can we narrow the knowledge gap between AI “experts” and the variety of people who use, interact with, and are impacted by these technologies?

Ethics and Governance of AI | Berkman Klein Center

What Is Artificial Intelligence (AI)? The TL;DR is that AI is the science of building computers that can solve problems the way humans do. But there's much (much) more to it than that.

What Is Artificial Intelligence (AI)? |

Get Free Intelligence Analysis For Tomorrow Advances From The Behavioral And Social **PCMag**

AI/ML expresses itself here in cognitive classification plus routing and intelligence at the user touchpoint, e.g., chatbots. Act. This is the “final mile” of the AIOps value chain. Automating analysis, workflow, and documentation is for naught if responsibility for action is put back in human hands.

What Is AIOps? A Beginner's Guide - BMC Blogs

Intelligence Analysis, Exploitation & Dissemination C5ISR Center researches and develops technologies that enable systematic processes for discovering, selecting, organizing, distilling, sharing, developing and using information to better understand the enemy and the enemy's environment during full-spectrum operations.

Intelligence Accelerated™ - Micron Technology

Today's AI is narrow. Applying trained models to new challenges requires an immense amount of new data training, and time. We need AI that combines different forms of knowledge, unpacks causal relationships, and learns new things on its own. In short, AI must have fluid intelligence— and that's exactly what our AI research teams are building.
