This course explores the liquid rocket engine design problem from a system level. The requirements, issues, problems, and criteria that define and shape a new engine system design are covered in detail. The compromises involved in system level design, such as component interactions, are also covered at length.

### LIQUID ROCKET ENGINE FLUID-COOLED COMBUSTION CHAMBERS 1.

**INTRODUCTION** The walls of the combustion chamber and nozzle of a liquid rocket engine must not be heated to temperatures that endanger the structural integrity of the chamber or nozzle. Several methods exist for cooling the walls so that the temperature is maintained at a safe level:
