There are many

different ways to

provide security for

local area networks

(LANs). Many of these

apply to the common

types of hardware that

How can a local area network (LAN) be secured?

You will learn the about Local Area Networks, TCP/IP, the OSI Framework and routing basics. You will learn

how networking affects security systems within an organization. You will learn the network components that guard an organization from cybersecurity attacks. In addition to networking, you will learn about database vulnerabilities and the tools/knowledge needed to research a database vulnerability for a variety of databases including SQL Injection, Oracle,
