The hydraulic closing pressure required to shear commonly used drill pipe is below 1,500 psi for BOP's with 14" pistons. These pistons are standard in all BOP's rated at 10,000 psi working pressure and higher. On lower pressure preventers, optional 14" pistons can be supplied for shearing instead of the standard 10" pistons.

Shaffer has been a recognized technology leader in pressure control equipment and blowout preventer (BOP) systems since 1928. Backed by more than 90 years of pressure control expertise As the pioneer of shearing technology from the Type 72 to the industry-leading low-force shear, Shaffer also introduced NXT in 1999, the first boltless BOP, followed by the LXT and the 20,000-psi boltless BOP ...

### **Shaffer - NOV**

A blowout preventer (BOP) is a large, high-pressure safety valve used to prevent the uncontrolled flow of liquids and gases during well drilling operations. Pressure control is a critical part of the drilling process, and, as a fail-safe component, a blowout preventer is essential to the safety of your rig.

The SeaPrime I Subsea MUX BOP Control System is fault-tolerant with the ability to re-configure hydraulic functions while remaining subsea, preventing costly stack pulls. Access to serviceable components is highly simplified, reducing the time for maintenance and repair. This new design offers three times more availability using just two pods.

### **Control Engineering | Subsea MUX pod control system**

Since the power fluid arrives at the subsea control pod at 3000 psi and the BOP functions have a maximum normal operating pressure of 1500 psi,

The Cameron U II BOP takes all of the features of the U BOP and adapts them for subsea use in the 18-3/4-10,000 and 15,000 psi WP sizes. Like all other Cameron preventers, the rams in the U II BOP are pressure energized. Wellbore pressure acts on the rams to increase the sealing force and maintain the seal in case of hydraulic pressure loss.
